DETAILED ACTION

THE FOLLOWING IS A NEW GROUND OF REJECTION NECESSITATED BY THE AMENDMENT

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 10-20, 22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Sato et al (Jan. 22, 1991).

Sato et al teach a device comprising a substrate of an inorganic dielectric (see whole doc. esp. figure 1 & example 1, layer 2 - electrode of metal oxide), charge transfer material which forms a charge transfer complex with an organic semiconductor wherein the charge transfer material comprises donors or acceptors, forms a self assembling layer and bonded to substrate (see figure 1 & example 1 layer 3 a first organic thin film containing acceptor molecules and a second organic thin film containing donor molecules (layer 4). The thin film would meet the limitation of organic semiconductor such as polycyclic compounds listed in column 13 & 14 for example).

The response filed 12/9/03 has been considered and deemed persuasive in regards to the Nakayama reference. The response states that Nakayama et al do not teach the charge transfer

occurs between two layers – the charge transfer material and the organic semiconductor. This argument while convincing is however met by the above Sato et al reference. Sato et al teach two thin film layers where one acts as donor and the other acceptor where charge transfer occurs between the layers.

SUMMARY

2. Claims 9, 21 & 25 are objected for depending on rejected claim. There is no prior art that teach a DNA molecule in which one strand is bound to substrate of claimed device and other strand bound to charge transfer material. Nor is there prior art that teach the device with the claimed structures.

CONCLUSION

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1637

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
